## Abstract

Pipelines for the OpenShift Container Platform is a cloud-native, continuous integration and continuous delivery (CI/CD) solution based on Kubernetes resources. It uses Tekton building blocks to automate deployments across multiple platforms by abstracting away the underlying implementation details.

## CHAPTER 1. ABOUT RED HAT OPENSIFT PIPELINES

Red Hat OpenShift Pipelines is a cloud-native, continuous integration and continuous delivery (CI/CD) solution based on Kubernetes resources. It uses Tekton building blocks to automate deployments across multiple platforms by abstracting away the underlying implementation details. Tekton introduces a number of standard custom resource definitions (CRDs) for defining CI/CD pipelines that are portable across Kubernetes distributions.

### NOTE

Because Red Hat OpenShift Pipelines releases on a different cadence from OpenShift Container Platform, the Red Hat OpenShift Pipelines documentation is now available as a separate documentation set at [Red Hat OpenShift Pipelines](#).
